

1. Eligibility & Team Composition Standards

- Open Academic Access:** The competition is strictly open to bona fide registered undergraduate and postgraduate students from all branches and degree programs (including B.Tech CSE, IT, ME, CE, ECE, BCA, MCA, B.Sc, BBA, B.Com, and allied management disciplines).
- Team Size:** Teams must strictly comprise a minimum of 2 members and a maximum of 3 members. Solo participation is prohibited to foster collaborative peer development.
- Interdisciplinary Flexibility:** Cross-departmental, interdisciplinary, and cross-academic-year team formations are actively encouraged (e.g., pairing a frontend/backend developer with a product designer, domain researcher, and business pitcher).
- Single Representation Rule:** An individual student can be registered with only one team throughout the duration of the sprint. Interchanging team rosters after registration closes will trigger automatic disqualification.

2. Point Scoring Architecture

DevSpark enforces scoring model.

Round	Challenge Format	Max Points
Round 1: LogicSprint	Synchronized Digital Aptitude & Tech Assessment (40	100 Points

Round	Challenge Format	Max Points
	MCQs)	
Round 3: DevSprint	AI-Augmented Rapid Prototype Build & Live Stage Defense	250 Points

3. Round-Specific Rules & Execution Protocols

Round 1 (LogicSprint) Regulations

- **Portal Access & Timing:** 45-minute synchronized testing window managed by an automated Apps Script trigger that auto-locks submissions at T + 45 minutes.
- **Scoring Scheme:**
 - Correct Answer: **+2.5 Points**
 - Incorrect Answer: **-0.5 Points** (Negative marking enforced to preserve scoring integrity)
 - Unattempted: **0.0 Points**
- **Device Constraint:** Exactly one submission form per team submitted from the designated Team Leader's device. Concurrent multiple submissions under one Team ID invalidate the score.
- **Integrity Rules:** External communication, unauthorized tabs, or cross-table consulting are strictly prohibited during the 45-minute active quiz.
-

Round 2 (DevSprint) Regulations

- **Track Selection:** Teams choose exactly one problem track from the 5 live-announced tracks at the start of the build sprint. Switching tracks mid-way is forbidden.
- **AI Tooling Approval & Guidelines:** Generative AI tools (ChatGPT, Gemini, Claude,

GitHub Copilot, v0, Cursor and others like Agentic code editors) are **fully authorized** for boilerplate synthesis, architectural ideation, and rapid scaffolding.

- **The "Zero-Black-Box" Rule:** AI tools must be orchestrated, not blindly copied. Every team member must be able to explain all component logic, data structures, state handlers, and API integrations during jury examination. Inability to explain AI-generated code triggers severe point deductions.
- **Mandatory Prompt Logging:** Every team must maintain and submit an AI_PROMPT_LOG.md file detailing the top 3–5 foundational system, scaffolding, and debugging prompts used during the build.
- **Live Functionality Requirement:** Prototypes must execute dynamically. Static wireframes, Figma-only designs, and non-reactive mockups receive 0 points for functionality.

4. Official Round 2 Jury Evaluation Rubric (250 Points)

Criterion	Max Points	Evaluation Focus & Indicators
1. Problem Alignment & Practical Utility	60 Pts	Direct fidelity to the chosen track; real-world feasibility, campus scalability, and tangible utility.
2. Functional Architecture & System Stability	70 Pts	Crash-free live execution; robust input validation, modular architecture, and error handling resilience.
3. AI Tool Orchestration & Prompt Mastery	40 Pts	Methodical, multi-turn prompting demonstrated in AI_PROMPT_LOG.md; sophisticated prompt engineering vs superficial

Criterion	Max Points	Evaluation Focus & Indicators
		copy-pasting.
4. UI/UX Design & User Experience	40 Pts	Visual polish, layout responsiveness, intuitive information hierarchy, and cognitive ease for end users.
5. Technical Defense & Live Q&A	40 Pts	Clarity and precision during jury cross-examination; technical depth, team balance, and defense of architectural trade-offs.
